

IST 222 Final Project

Create a website for a fictitious Presidential Candidate. I encourage you to be creative and have fun with the assignment.

Place all files in a folder in your account entitled **'Final'**.

General:

You are going to be a campaign manager for a presidential candidate. Your candidate is going to be a cartoon character you select. You should find several pictures of your candidate to use on the webpages created below.

Required:

1. The main page should be [welcome.html](#). When I load that page, it should tell me the site has been redesigned and redirect me to the new page after a few seconds. [See tutorial 1 for guidance]
2. The new page should be named [new.html](#). This page (and all other pages) should have a horizontal navigation bar with links to the following support pages: [schedule](#), [bio](#), [feedback](#). In addition to these links, the page should contain a welcome message and general info about the candidate. The links on the page should feature a mouse over effect, and when I point to each link, I should see a brief description of where that link takes me in a popup text area.
3. The schedule page ([sched.html](#)) should have a nicely formatted table showing me AT LEAST 6 upcoming appearances. It should show me the city, date, and location for each appearance. The table take up approximately 75% of the page width and be centered. All locations should be in South Carolina. The top row of the table should contain column headings and should be styled in such a way to make it stand out from the rest of the table. Beneath the table should be a link labelled 'Map of upcoming events' that will take me to another page (see #4).
4. The map page ([map.html](#)) should feature a simple map of South Carolina with a star over each appearance location. When I click on that star (or general area), I should go to a support page telling me about that location. (name these pages [loc1](#), [loc2](#), [loc3](#), etc. – these pages need not contain much info, just enough text to show me the page is there.)
5. The bio page ([bio.html](#)) should have a picture of the candidate in the upper right hand corner, and text should flow around the picture. Locate some appropriate patriotic image on the web and use that image as a watermark backdrop of the page, located in the center of the page.
6. The feedback page ([feed.html](#)) should include a form asking for a volunteer's name, email address, gender, and age. It should include a text box for the volunteer to provide feedback and the necessary form buttons. This form should implement all of the validation and stylistic elements introduced in chapter 7. The page should also allow someone to make a contribution to the campaign using a credit card.
